Overview

Nuvio replaces the patchwork of invoicing, expense, payroll-sync and cash-forecasting tools that small finance teams juggle with one workspace. Its AI layer reconciles transactions, flags anomalies and produces investor-ready reporting without a dedicated finance hire.

Execution Velocity	88%	Excellent	Weight 15%

AI review

Nuvio combines an unusually strong founding team with efficient, fast revenue growth. Retention is healthy and capital efficiency is well inside the range investors consider strong at this stage. The score is held back mainly by market structure: SME finance is crowded and SME customers churn more than the mid-market accounts the company is starting to land.

✓ WHAT STANDS OUT

- Growing 131% a year while burning ~$1.1 for every $1 of net new ARR
- Founders have shipped and exited before, and the team is balanced
- 32 months of runway after the Series B removes near-term financing risk

⚠ WATCH-OUTS

- Net revenue retention (118%) is healthy but below the 120%+ premium tier
- Crowded segment: Ledgerly and Brightbook both move down-market
- Growth Score fell 5 points last quarter as ARR growth rate eased
